CONCEPT AND MOTIVATION

Goal of this library is to provide presentation platform for self-branding of engineer using Sphinx. Using static site hosting service, you can show own presentations to anyone.

Core motivation is that I want to play presentation by this library.

CONTENTS

4.1 Setup

4.1.1 Requirements

`sphinx-revealjs` requires Python 3.6+ and Sphinx.

Current development environment

- Python: 3.9
- Sphinx: 3.5.4

4.1.2 Installation

You can install `sphinx-revealjs` from PyPI.

```
$ pip install sphinx-revealjs
```

`sphinx-revealjs` specify Sphinx and docutils expressly as dependencies. You get Sphinx by this command only.

4.1.3 Configuration

`sphinx-revealjs` does not provide `revealjs` builder instead of `html` builder. To use builder, edit your `conf.py`.

```
extensions = [  
    "sphinx_revealjs",  
]
```

if you want to configure more, edit `conf.py` with seeing *Configurations*.

4.1.4 Build

Run make command to build presentations. Files are generated to **revealjs** folder.

```
$ make revealjs
```

4.2 Upgrading guide

4.2.1 To 1.x from 0.x

From version 1.x, this bundle Reveal.js 4.x, and implement for it. Due it, documentations for old version does not work to build correctly.

You have to lock version, or migrate source for next version.

revealjs_script_plugins

Reveal.js 4.x has big changes for usage of plugins from 3.x.

sphinx-revealjs is also adjust for this changes, and need update `revealjs_script_plugins`.

```
revealjs_script_plugins = [  
  {  
+    "name": "RevealNotes",  
+    "src": "revealjs4/plugin/notes/notes.js",  
-    "src": "revealjs/plugin/notes/notes.js",  
  },  
  {  
+    "name": "RevealHighlight",  
+    "src": "revealjs4/plugin/highlight/highlight.js",  
-    "src": "revealjs/plugin/highlight/highlight.js",  
-    "options": ""  
-    {async: true, callback: function() { hljs.initHighlightingOnLoad(); } }  
-    ""  
  },  
]
```

- Changed structure from src and options to src and name.
 - For 4.x, to use plugin for core,
add class name of it not source path,
and need to preload source by `script` tag.
 - Class name is defined in plugin source.
You need find from source or ref documents (official plugin only)
 - In adding, does not accept options for plugins.

MORE: See [Using Plugins from Reveal.js document](#)

revealjs_css_files

If you use highlight plugin and specify bundled stylesheet file, change path of stylesheet. Style files is migrated to highlight plugin folder.

- Before: revealjs/lib/css/zenburn.css
